Who We Are

After delivering highly successful mission-critical solutions to the federal government for several years, C. Mack Solutions and Dev Technology Group joined forces to form Novilo Technology Solutions. The mission focus of both companies along with a commitment to our partnership form the basis of Novilo Technology Solutions. We offer a full suite of IT services for the federal government’s IT systems

Our partnership has been approved by the U.S. Small Business Administration (SBA) All-Small Mentor-Protégé Program (ASMP). C. Mack Solutions, a small business, is the managing partner and Dev Technology Group is the SBA-approved mentor.

Services

Agile Delivery

Our Certified Agile practitioners ensure that our teams will deliver value faster, with greater quality and predictability, and with a greater aptitude to respond to change. With deep experience in Agile Transformation and Agile Software development, our team enables organizations to unlock enormous value and efficiency in support of their missions.

Artificial Intelligence (AI) and Machine Learning (ML)

Organizations need immediate access to actionable intelligence to make mission critical decisions. The available tools and technologies to harness the power of enterprise data at scale have never been more robust. Our team of experts combines a deep understanding of our clients' business with leading-edge AI and ML experience to deliver highly impactful solutions. Examples of AI technologies we have leveraged for our clients include Robotic Process Automations (RPAs), Natural Language Processing (NLP), and Artificial Neural Networks (ANNs).

Cloud Computing

The power of cloud computing is the ability to provide access to shared computing services to enable faster innovation, flexible resources, and economies of scale. Our Digital Transformation specialists work directly with our clients to accelerate their migration to the cloud and experience the benefits of true end-to-end digital transformation.

DevSecOps

Our proven track record of providing Continuous Integration (CI) and Continuous Delivery (CD) solutions to enable high quality delivery of software in an efficient and repeatable way is highly impactful. Leveraging workflow automation with rapid feedback loops greatly improves the quality and speed with which our teams deliver software.

Services Continued

Data Visualization

Massive amounts of data are now available and data visualization tools and technologies are essential to analyze this information and make data-driven decisions. Our experts collaborate with our clients to provide visual elements that provide accessibility and transparency to complex data sets. Combining essential elements of impactful data with easy-to-understand visualization is where our team thrives.

Biometrics and Identity Management

Our multi-modal biometric solutions improve the accuracy and speed of correct identification. We follow NIST standards for information exchange to create biometric solutions that can be applied at any agency using biometric peripherals from any vendor. We focus on person centric solutions to make identity management more effective.

IT and Legacy Modernization

We help our clients upgrade their legacy applications to modern technologies by focusing on how to best meet mission and business process needs. We enable our clients to make the most of their IT investments by looking to the future and considering both current and future needs

Technologies and Platforms

We have experience supporting a wide range of technologies and platforms across the federal government including Microsoft and SharePoint solutions, Open Source technologies, and ITSM solutions including both ServiceNow and Remedy.
